EXPERIENCE

Huawei

Software Engineer / Cloud & DevOps Engineer

Feb 2024 – Present

- Built and maintained Huawei Cloud & Cloud Stack infrastructure, including ECS, RDS, EVS, SFS, OBS, and networking services.
- Designed containerized workloads with Kubernetes (CCE/CCI), Docker, and Nginx.
- Implemented CI/CD pipelines using Huawei CodeArts, CodeHub, Docker, Kubernetes, and SWR.
- Developed a geolocation app used by hundreds of companies in the Middle East KooMap with Angular, RxJS, Observables, and RESTful API integrations.
- Built the Database-Helper extension An application used to connect databases for use in the CodeArts IDE using Vue 3, TypeScript, Vuex, and vue-i18n.
- Produced technical documentation and reusable development guidelines for frontend and cloud solutions.

Galileo Healthcare Technologies

Frontend Developer

Jan 2022 – Feb 2024

- Developed used by hundreds of people HBYS healthcare applications with Angular, TypeScript, reactive forms, RxJS, Sass, Tailwind CSS, and Angular lifecycle hooks.
- Contributed to Wound Procedure and Nuclear Medicine Clinical systems, including reusable UI components and API-driven workflows.
- Worked on backend services and database integrations using Spring Boot, Spring MVC, Spring Data, NestJS, Java, PostgreSQL, and MySQL.
- Supported DevOps processes by managing automated test, build, and deployment stages through CI/CD pipelines.

Turkish Electricity Distribution Corporation

Software Intern

Aug 2020 – Sep 2020

- Researched engineering workflows and contributed to a project developed with .NET MVC.

YCP Information Technologies

Software Intern

Jul 2018 – Aug 2018

- Developed .NET MVC functionality using C# and Visual Studio.

EDUCATION

Çankaya University

B.Sc. in Computer Engineering

2021

Centre of English Studies

English Language Program

2015

PROJECTS

Huawei CodeArts CI/CD Pipeline

- Built thanks to automation, CI/CD processes have accelerated build processes a complete pipeline for a Vue.js application using CodeHub source control, Docker image build, Nginx serving layer, Kubernetes deployment on CCE, and image publishing to SWR.
By integrating this automation tool, I was able to speed up pipeline processes and catch errors more quickly.

Cloud-Native E-commerce Architecture

- Designed CCE-based long-running services and CCI-based event-driven workloads supported by Huawei Cloud networking, database, and storage services.
By distributing the database services here among the SFS and OBS services based on data types and optimizing the data, we achieved more efficient results.

TECHNICAL SKILLS

Cloud & DevOps: Huawei Cloud, Huawei Cloud Stack, CCE, CCI, ECS, ELB, RDS, EVS, SFS, OBS, SWR, CodeArts, Docker, Kubernetes, Terraform, Jenkins, GitLab CI, GitHub Actions, Linux, Ubuntu

Networking: VPC, Subnetting, VPC Peering, Route Tables, Security Groups, NAT Gateway, DNAT, SNAT, Load Balancing

Frontend: Angular, Vue.js 2/3, React, TypeScript, JavaScript, RxJS, Vuex, Redux, Sass, Material UI, Tailwind CSS, Figma

Backend & Data: Java, Spring Boot, Spring MVC, Spring Data, Node.js, Express.js, NestJS, Firebase, PostgreSQL, MySQL

Tools & Practices: Git, Bitbucket, Jira, Agile/Scrum, REST APIs, CI/CD, Infrastructure as Code
